\_YOU MAY DOWNLOAD AUDIO CDS OF THIS SONG ON THE SIDE BOTTOM OF THIS PAGE\_ 'LINK'\_ HOW TO MAKE WIN CE MEMO SPOKE WINCE SONG VERSION OF THIS SONG FROM PURPLE STARS NEPAL'LINK'Video: Ch 3 Normally I would put this video on the book page, but the Linked Header feature was lacking on the old site so I thought I'd post it here instead, plus I'm too lazy to copy the link over to my old page. This is something a lot of visitors have been asking for, including Jim Chapman. It would be a lot easier to make a video if it all was video. Unfortunately, I haven't been able to master video yet and I'm not sure that it is something I want to put the effort into. Association of pesticide exposure and genetic polymorphism of the cytochrome P450 1A1 (CYP1A1) and glutathione S-transferase (GST) M1 null genotype with human lung cancer. Alcohol, tobacco, and environmental toxicant exposures increase the risk of lung cancer. However, these risks do not account for the variability in lung cancer risk. Genetic polymorphisms of glutathione S-transferase (GST), cytochrome P450 (CYP) 1A1, and N-acetyltransferase (NAT) 1, along with alcohol consumption, may act as a confounding factor for the association between pesticide exposures and the risk of lung cancer. We therefore examined the potential interactions among pesticide exposure, the GSTM1 null genotype, and CYP1A1 polymorphism with the risk of lung cancer in Taiwanese men. We conducted a case-control study, and blood samples were collected from 293 lung cancer patients and 291 hospital-based controls. The presence of GSTM1, CYP1A1, and NAT1 null genotypes was determined. The GSTM1 null genotype was associated with increased risk of lung cancer when compared to the GSTM1 non-null genotype (OR = 1.96, 95% CI = 1.35-2.84). The risk was further increased for the GSTM1 null genotype among pesticide sprayers (OR = 2.38, 95% CI = 1.30-4.35). The CYP1A1 null genotype was associated with an elevated 82157476af
